

Aqualux™ Pool Finish

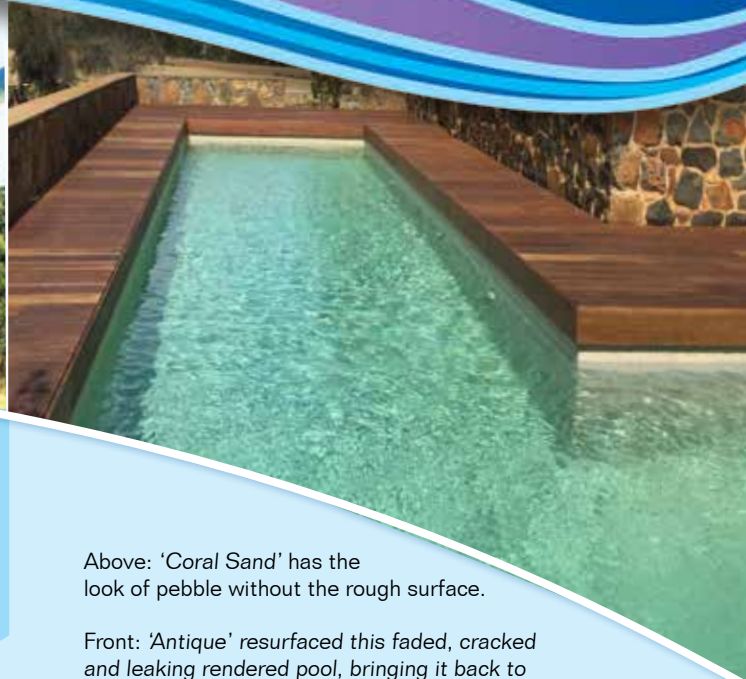

Aqualux supports the weight of a 4WD in this show of strength

So what exactly *is* Aqualux?

Genuine Aqualux is a specialist, purpose created membrane, manufactured from an enhanced polymer compound, formed to provide a durable and flexible finish for domestic and commercial swimming pools.

Aqualux has been made to the same, secret recipe which has been used in Australia since the 1970's. While there are some cheap, imitation liner products in the market, don't be fooled.

Unlike 'copycat' products, Aqualux uses only the highest quality raw materials, and every batch is laboratory tested to ensure it meets strict standards. Quality assurance tests include thickness, durability, stretch, shrinkage and colour consistency.

Above: 'Coral Sand' has the look of pebble without the rough surface.

Front: 'Antique' resurfaced this faded, cracked and leaking rendered pool, bringing it back to better-than-new condition.

Aqualux in 'Maui' solved leak issues with this previously tiled pool.

The Ultimate Pool Finish

Suitable for both new pools and renovations, an Aqualux Pool Finish by ABGAL can be installed into any brand, size, shape or make of swimming pool. Aqualux is smooth to touch, requires less maintenance than other finishes, and will not blister, peel, crack or flake.

Highly flexible, Aqualux can stretch around 300% - making it ideal for pools with ongoing leak issues from movement. Steps and benches are all built into the membrane, allowing it to be installed quickly and in one single piece, with no onsite alterations required.

Available in a range of designer prints and colours, Aqualux can be fitted over any existing surface, including painted concrete, tiles, fibreglass, marblesheen, pebble and other rendered finishes.

The solution to so many pool problems

Whether it's a simple facelift for a dated pool, or a solution to ongoing leak repairs on a 'hard' surface finish, an Aqualux interior may be just what you are looking for.

This pebble pool was widened before being finished in 'Caribbean'.

Moving expansion joints, cracks, peeling paint, osmosis, splintered or bubbled fibreglass and even leaks caused by structural movement can be solved by resurfacing with Aqualux.

And if you're worried your pebble or marblesheen pool may contain asbestos, Aqualux provides a durable, vacuum sealed, protective membrane between the pool shell and your family.

You can also add a step or extend a bench, even make structural changes to the pool – an Aqualux membrane seals the pool shell, without risk of leaking.

Incredibly easy to care for

Sanitised for total hygiene, Aqualux actually inhibits green algae, bacteria and fungus, and is naturally immune to things like 'blackspot'. Non-reactive to chemicals, Aqualux has no effect on your water balance, and will never need scrubbing!

Pool owners converting to Aqualux from pebble or tiled finishes are always amazed at how much easier it is to keep an Aqualux pool fresh and clean.

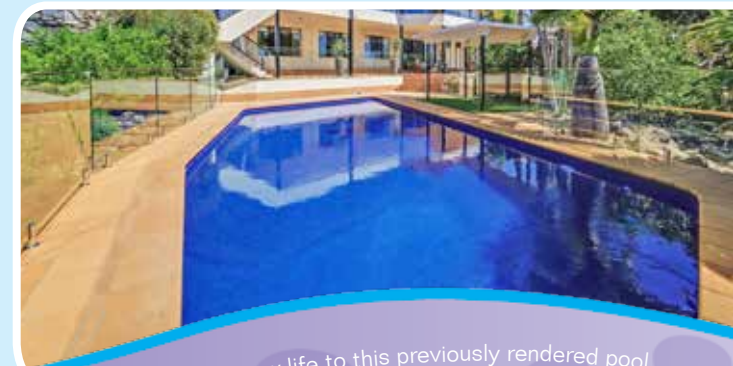

This Aqualux finish in 'Casablanca' included steps and stools.

Made in Australia by ABGAL

Servicing the pool industry since 1976, ABGAL is an Australian owned company, who have manufactured interior finishes for well over 250,000 pools around Australia, New Zealand and Europe.

World class technology, industry-leading techniques and over 40 years experience combine to ensure every single Aqualux pool finish is crafted with absolute precision and unrivalled quality - so you can be confident your pool will remain water-tight for many years to come.

'Bahama' gives new life to this previously rendered pool.
