What's covering your spa?

If you're using just the hard, vinyl wrapped cover that came with your spa, then chances are, your spa is losing more heat than it needs to be.

Independent tests have proven our 10mm Spa Foam to be just as effective as a hard cover, while a hard cover is 2.5% more effective when used in conjunction with a solar cover. Of course, for the highest heat retention, our 20mm Spa Foam offers the best results.

Thermal Spa Foam

The best choice for heat retention.

Made of a high quality, closed-cell thermal foam with blue embossed finish, these foam covers have been independently tested, and *proven* to out perform many hard covers when it comes to heat retention.

Spa Foam is easily trimmed with scissors or a knife, and offers excellent insulative properties, preventing 100% of water loss due to evaporation.

Choose 20mm or 10mm thick foam

The 20mm foam performed exceptionally well during testing - losing only 8.9° of heat, compared to a standard hard cover, which lost 9.7° of heat, and also lost water to evaporation!

Spa Foam is supplied in individual sheets which fit together and sit on the water. The 10mm sheets (pictured above) are supplied with hinges for extra rigidity. These are not necessary for the 20mm sheets.

Spa Soft Covers

Lightweight but durable, it's easy to see why these soft, fleece filled PVC covers are quickly gaining popularity. They are a great alternative to expensive hard covers - particularly when used in conjunction with a floating cover. Fully reversible, the covers feature a black trim, and are grey on one side and beige on the other - simply flip to suit your preferred colour scheme.

To prevent the cover from sitting in the water and stop water pooling on top, each cover is supplied with an inflatable bladder. Covers also feature child resistant, lockable clips on all sides (pictured above left).

Sizes and shapes to suit most portable spas

With options for an adjustable fit, these soft covers suit square, rectangular and octagonal shaped spas.

Leafstop for Portable Spas

These practical, polypropylene mesh covers are an economical way to keep leaves and debris out of an uncovered spa.

They are also ideal to use in conjunction with a Thermal Spa Foam or other floating cover to protect it from leaves, debris and sun damage.

Lets fresh water in, but keeps leaves out

Leafstop covers are made from a high-tech, blended micro-mesh fabric that allows rain water through, but keeps leaves out.

The Leafstop's edge is fitted with eyelets and supplied standard with bungee cord which is threaded through, so the cover slips over the top of the spa like a big shower cap.

Like the Thermal Foam and Spa Soft Covers, Leafstop Spa covers also have a 12 month (pro-rata) warranty.
