

# Solar Pool Covers

Do you have leaf problems during winter? Leafstop is available to suit all popular sizes of above ground pool. For inground pools, ask about having a Pooltex cover made - Pooltex can even be fitted around water features and spas!

## How do solar covers work?

Solar covers are made from a film containing thousands of small bubbles, which work together to collect and retain heat in your pool. A solar cover floats on top of the water, allowing solar energy to pass through, then helps retain that heat in the pool. Your pool pump circulates the heated water.

Heat loss mainly occurs at night through evaporation. When the outside air temperature drops below the temperature of the pool, the pool water will create steam (which rises up into the air) so your pool loses both warmth and water! In the photo (below left) you can actually see steam coming off the surface of an uncovered pool. A pool cover creates a physical barrier on the pool surface, preventing these losses.

## save money Reduce chemical use and save water

Keep it Clean. Keep it Warm. Keep it Full. Ask for Oasis!

## Why use a solar cover?

That's easy – by covering your pool you will:

- Use the sun to make your pool up to 8°C warmer
- Enjoy a longer swimming season
- Cut your chemical consumption by around half
- Save water – stop up to 99.84% of evaporation
- Spend less time cleaning your pool

So the question isn't 'Should I have a pool cover?', but 'Which pool cover should I have?' The smart choice is an ABGAL Oasis Pool Cover – it offers all the standard benefits, plus much more:

- The unique bubble shape offers maximum heat retention and water saving capabilities
- The flatter profile offers maximum insulation without the bulk of other brands
- Contains extra UV inhibitors, specially formulated for our harsh Australian climate
- Suitable for salt water or chlorine, both outdoor and indoor pools

- Treated to resist mould and other bacteria
- Heat welded seams for maximum strength
- Fully recyclable – offcuts can be recycled at any council plant with LDPE 4 recycling
- Australian made and Australian owned
- 400, 500 & 550 micron covers are Smart Approved WaterMark, WaterWise & Climate Care Certified

## Make your cover easier to use with a reel system

Using a pool cover is always easier with a reel (roller). With a HydroTools reel, you will be able to remove and replace your cover in just a couple of minutes.

A reel also reduces wear and tear on a cover, extending its life expectancy. All HydroTools reels are supplied with attachment straps and protective overcover.

There are options to suit most swimming pools - from pipe frame style portable pools to inground pools up to 6.7m wide.

See our Reels brochure for more info, or visit [www.abgal.com.au](http://www.abgal.com.au)

## Which cover suits your needs?

### Oasis Solarcover

For a thicker, stronger cover, look at the range of 550 micron solar covers - 'SilverBack' for maximum heat retention, 'Clarity' for a clear view under the cover, or the very popular 'Premium Blue'.

Classic blue Oasis is available in 250, 400 & 500 micron.

If your pool gets too hot, you may prefer KoolCover - it has all the water saving benefits of a solar cover, but blocks the sun from entering the pool, keeping the pool cooler, and also reducing algae growth. In tropical climates, it can be removed at night to release any build up of ground heat.

### Smart Approved WaterMark

Oasis 400, 500 and 550 micron Covers have all been independently tested, and are Smart Approved WaterMark licensed, Waterwise and Climate Care Certified, making them compliant with any local rebate schemes that may be available.
