

Aqualux in 'Reef Pebble' returns this fibreglass pool to 'as new'.

The look of 'Mosaic Tile' with the benefits of Aqualux.

Aqualux™ – what is it?

Aqualux™ is the only pool finish which has been specifically engineered as a pool finish.

It is a membrane manufactured from an enhanced polymer compound – which is pre-formed to provide an attractive, durable and flexible finish to domestic and commercial swimming pools.

Designed in Australia, specifically for the harsh Australian weather conditions, Aqualux will out-perform other pool finishes when it comes to earth tremors, drought, flood and UV damage.

Aqualux is capable of stretching over 200% without tearing – in an incredible show of strength this 4WD was driven onto a piece of Aqualux and lifted a metre in the air.

Beware of imitations

Genuine Aqualux provides more real benefits than any other pool interior. Smooth to touch, it will not crack, chip or flake, requires very little maintenance, and can be installed in any size, shape and make of pool.

While there are some cheap imitation products on the market, (some have even copied the Aqualux patterns and use the Aqualux name on their websites) don't be fooled.

If your installer is buying from ABGAL, you can be assured you are getting genuine Aqualux.

Leaking tiles

This glass tiled pool (above) was built in 2012, and the tiling alone cost the owners over \$50,000! Within months the pool was leaking, and needed repairs. A few months later, it happened again, then again. It soon became clear that ground movement was to blame.

An Aqualux membrane was custom made to fit the pool, and instantly put an end to all issues. The pool owners are now enjoying a pool that doesn't leak, uses less chemicals than before, looks better and requires less maintenance!

AQUALUX
Pool Finish

Give your pool new life
with an Aqualux™ Pool Finish

Beautiful. Durable. Low Maintenance.

This Aqualux finish in 'Casablanca' includes multiple bar stools and steps.

This tiled pool was converted to Aqualux in 'Antique' to stop leaks.

The Ultimate Pool Finish

Suitable for both new pools and renovations, an Aqualux™ pool finish by ABGAL can be installed into any brand, size, shape or make of swimming pool, and is guaranteed to keep your pool shell water-tight, for years to come.

Beautiful colours and patterns

With over a dozen designer colours and patterns to select from at any given time, you will have no trouble finding one to match your vision perfectly. The special pigments used give a real depth and richness of colour, not seen in any other pool finish.

Low maintenance and hygienic

Sanitised for total hygiene, Aqualux actually inhibits green algae, bacteria and fungal growth. If you are changing over from a tile, pebble or rendered pool, you will find it is far easier to keep your pool sparkling clean and hygienic – all year round.

Silky smooth – ideal for families

Run your hand across the surface, and you'll love the way it feels. Unlike a pebble or rendered finish, the silky smooth finish will never graze or bruise soft skin.

Strong, durable and flexible

Where many other pool finishes will fail, Aqualux endures. It will not split, crack, chip or blister, and can stretch over 200% without breaking. This flexibility is further enhanced by the fact that the membrane is vacuumed into place, and not bonded to the pool surface, allowing it to absorb even more movement.

The only truly flexible pool interior on the market, Aqualux is ideal for areas where ground movement causes cracks and leakage.

Watertight, guaranteed

Aqualux is guaranteed to keep your pool shell watertight for ten years, and will usually last much longer. In the right conditions, a 15 to 20 year life is not unusual.

The solution to so many pool problems

Moving expansion joints, cracks, peeling paint, splintered fibreglass and leakage caused by structural movement can all be solved by resurfacing with an Aqualux pool finish.

Renovate, repair, revitalise

Aqualux can be installed directly over the top of most existing pool finishes. Pebbled, plastered, tiled and painted pools are easily brought back to life with Aqualux. It is also ideal if you are repairing fibreglass that has faded, bubbled or splintered.

Aqualux will provide a perfectly sealed, protective membrane between the pool shell, and your family.

Any pool, any shape

Every single Aqualux membrane is custom made to order. Nothing is 'off the shelf' – and ABGAL's unique, proprietary technology ensures a perfect fit to your pool shell – no matter what it's shape, size or build type.

Steps, benches, deep ends and even bar stools can be incorporated into the finish.

This 80's tile and slate pool looked dated, and had steps added before being resurfaced in Aqualux 'Pacific' to give it new life.

Over 20,000 happy pool owners

There are over 20,000 Australian pool owners currently enjoying the benefits of an Aqualux pool finish. Here are just a few:

"Our new tiled pool leaked within a few weeks of installation.

After \$4,000 worth of repairs that didn't help, someone suggested Aqualux. It solved the problem, it looks great and it's easier to keep clean. I wish we'd known about it in the first place."

Kelly & Keith, Parkinson, Qld – August 2013

"We renovated our pebblecrete pool with Aqualux in Coral Sand. It looks just like the original pebble, but it's so smooth! It's been in for 3 months, and we haven't cleaned it once. Love it".

Di, Penrith, NSW – April 2013

"Our pool looks brand new, and the colour is just amazing. It's hard to believe there's a 40 year old pool under there!"

J Delaney, Brisbane, Qld – January 2014

Only Aqualux™ 'ticks all the boxes' when compared against other surface finishes!

Benefit	Aqualux™	Paint	Pebble	Fibreglass	Plaster
Smooth to Touch	✓	✓		✓
