

## THE ULTRA NEW TRIPLE CELL SOLAR POOL BLANKET

**Evolving over a '25 year' span, Triple Cell is here, and making other solar covers obsolete.**

Triple Cell is the first purpose designed and manufactured pool blanket. It breaks away from the traditional 'bubble wrap' style and its associated problems.

Triple Cell is a world first - and it's made in Australia!

Triple Cell is a solar cell that acts as a collector of energy. This energy is transformed to heat the water better.

Triple Cell provides better all round insulating performance due to its greater still 'air zone'. Its unique cell design also offers more protection from chlorine attack and harmful UV rays.

The manufacturing process of Triple Cell ensures a more uniform thickness at the side, top and base of the cell. Unlike bubble, where the thickness can be inconsistent with less life expectancy, triple cell will have a long life.

Triple Cell lays flatter on the pool surface and rolls up easier over header courses - plus automatic cleaners work better.

Triple Cell Solar Pool Blankets are compatible with chlorine and salt water pools, and come with a 12 year, pro-rata warranty.

Traditional Round Bubble

Triple Cell Bubble<sup>®</sup>

ACTUAL SIZE

ACTUAL SIZE

- Triple Cell is = 3 standard round bubbles. The more contact with the water = better heating, better insulation and the pool stays warmer for longer...that's Triple Cell.
- With Traditional Bubble, performance may be reduced due to the shaped "dead zone" between the bubbles not being in contact with the water.
- Triple Cell is leading the world in pool blanket technology, made in Australia and exported to the world.
