Why an ABGAL Solar Cover?

ABGAL is an all Australian, family owned company which has been making solar covers since 1976.

- ABGAL Oasis contains extra UV inhibitors, specially formulated to resist sun, salt and chemicals
- Made in Australia, using Australian materials.
- Durable, low profile bubble shape has no weak spots
- Can be pre-cut to size in the factory - any pool, any shape, any size (*additional charges apply)
- ABGAL recycle all their offcuts, and if you need to trim on-site, you can recycle yours too - return anywhere that accepts LDPE4
- Climate Care Certified
- For every Oasis cover sold, ABGAL donate to Farm Angels - a rural charity co-ordinating relief to Aussie farmers impacted by drought, fire, flood and other difficulties.

Proudly made in Australia - since 1976!

Oasis Premium Blue

Oasis WaterMark with Neptune Reel

Can be pre-cut to any size or shape!

Oasis Clarity

Why use a solar pool cover?

An uncovered pool can lose thousands of litres of water to evaporation. When water evaporates, so do the chemicals - and any heat which may have been gained. By covering up, you can:

- Reduce overnight heat loss and heating costs
- Cut salt/chemical consumption up to 50%
- Save water – stop up to 99.84% of evaporation
- Have a cleaner pool, with fewer leaves to scoop out
- Enjoy a pool up to 8°C warmer

So the question isn't 'Should I have a solar cover?', but 'Which solar cover should I have?'

Covers to heat the water

If faster heating is your top priority, then Oasis Clarity or any of the Oasis 'classic' covers in 500, 400 or 250 micron are your best choice. (The more translucent the solar cover, the faster heat from the sun can pass into the water.)

If your pool is already heated, and you don't want the expense of a Heatshield thermal cover, then Oasis SilverBack is ideal. The reflective silver backing holds the heat in - like a lid on a saucepan.

WaterMark is another great option. Designed for people who don't like the look of a solar cover, WaterMark is printed with a natural looking water pattern. Translucent blue underneath with a semi-opaque top layer, it almost looks like an uncovered pool at first glance!

To prevent water loss from evaporation, it is important to keep the cover on at night - most evaporation occurs overnight, when the water is warmer than the outside air temperature. Wind is also a large contributing factor.

Easy to install

Solar covers are easily cut to shape with scissors, but if you prefer not to DIY, ask your pool shop about ABGAL's pre-cut options.

Leaf & debris problems

For minor leaf problems, a solar cover can be cut a little larger to sit up the pool wall to stop leaves falling in. Cut a flap into the skimmer, and just sweep them in or blow them off before taking the cover off.

For major leaf issues, ask about a custom Pooltex leaf cover, which can be made to fit any pool. For above-ground pools, Leafstop is a simple alternative which works a bit like a shower cap.
