

Less wastage with pre-cut to fit options

Why an ABGAL Pool Cover?

ABGAL is an all Australian, family owned company which has been making pool covers since 1976.

- ABGAL Oasis contains extra UV inhibitors, specially formulated to resist sun, salt and chemicals
- Made in Australia, using Australian materials.
- Durable, low profile bubble shape has no weak spots
- Can be pre-cut to size in the factory - any pool, any shape, any size (*additional charges apply)
- ABGAL recycle all their offcuts, and if you need to trim on-site, you can recycle yours too - return anywhere that accepts LDPE4
- 400, 500 & 550 micron covers are Smart Approved WaterMark, WaterWise & Climate Care Certified
- For every Oasis cover sold, ABGAL donate the funds to provide 40L of water to Drought Angels, in support of Australian Farmers.

MY POOL MEASUREMENTS

Can be pre-cut to any size or shape!

Why use a solar pool cover?

An uncovered pool can lose thousands of litres of water to evaporation. When water evaporates, so do the chemicals - and any heat which may have been gained.

- By covering up, you can:
- Reduce overnight heat loss and heating costs
 - Cut salt/chemical consumption up to 50%
 - Save water – stop up to 99.84% of evaporation
 - Have a cleaner pool, with fewer leaves
 - Enjoy a pool up to 8°C warmer

So the question isn't 'Should I have a solar cover?', but 'Which solar cover should I have?'

Covers to heat the water

If faster heating is your top priority, then Clarity 550, or any of the traditional Oasis covers in 500, 400 or 250 micron are your best choice. (The more translucent the solar cover, the more quickly heat from the sun can pass into the water.)

If your pool is already heated, and you don't want the expense of a Heatshield thermal cover, then Oasis SilverBack 550 is ideal. The reflective silver backing holds the heat in (like a lid on a saucepan).

For preventing evaporation and heat loss, WaterMark is a great option! Designed for people who don't like the look of a solar cover, WaterMark has been printed with a natural looking water pattern. Translucent blue underneath, with a semi-opaque top layer, it almost looks like an uncovered pool at first glance.

WaterMark is also a good option if your pool is in direct sun and gets too hot. Being semi-opaque, it lets less sunlight in than a fully translucent cover.

To prevent water loss from evaporation, it is important to keep the cover on at night - most evaporation occurs when the water is warmer than the air temperature.

Leaf & debris problems

For minor leaf problems, a solar cover can be cut a little larger to sit up the pool wall to stop leaves falling in. Cut a flap into the skimmer, and just sweep them in or blow them off before taking the cover off.

For major leaf issues, ask about a custom Pooltex leaf cover, which can be made to fit any pool. For above-ground pools, Leafstop is a great budget alternative.
